

**NPC Secure** is an Internet-based, real time credit/debit card and check payment application that enables businesses to process and manage customer payments through a PC for face-to-face, over the phone, and customer-initiated web transactions.

With NPC Secure, any business with an Internet connection can have access to the most powerful, flexible and cost-effective payment application available – with no software to install or maintain!

If you sell products on your website, NPC Secure is your solution to accept customer-initiated payments online automatically. NPC Secure also meets the credit card processing industry's PCI security requirements by securing cardholder data, so start using NPC Secure and be confident that your customer's data is secure and protected.

## How Can You Benefit?

### Web-based Payment Processing

- Process payments **through your PC or MAC**, rather than a terminal, saving time and counter-space.
- Accept payments **face-to-face and over the phone** giving convenience to your customers.
- **Minimize delinquent payments** with FREE recurring billing options for your customers.
- Take advantage of **unlimited employee log-ons** for easy access anywhere you have the Internet.
- Use the tracking of level 2 & 3 purchasing card data, including large ticket processing **to lower your costs**.

### Internet Gateway Processing

- Accept customer-initiated payments online when you **sell products on your website**.
- Over 90 **shopping carts** are certified, making implementation seamless.
- **Simple connection** instructions for use with software providers.
- Make online customer contributions easy with **one payment button**.

### Additional Benefits

- **Customized reporting options** allow you the flexibility to import data into other software for easy store reconciliation.
- **Minimize paper & mailing expenses** by customizing electronic receipts for you and your customers.
- **Free Standard Fraud Services to protect You & Your customers.**
  - *AVS (Address Verification Service) helps reduce fraud instances by the simple click of the mouse.*
  - *Velocity prevents multiple transaction attempts with email notifications of suspicious activity.*
